

Electronic overload relay EF65, EF96 and EF146

Electronic overload relays are the alternative to the thermal overload relays. An electronic overload relay offers reliable and fast protection for motors in the event of overload or phase failure. Starter combinations are setup together with contactors.

2CDC231001S0012

Description

- Overload protection – trip class 10E, 20E, 30E selectable
- Phase loss sensitivity
- Temperature compensation from -25 ... +70 °C
- Adjustable current setting for overload protection
- Automatic or manual reset selectable
- Trip-free mechanism
- Status indication
- STOP and TEST function
- Direct mounting onto block contactors
- Sealable operating elements
- Self-supplied devices

Order data

EF65, EF96, EF146 screw terminal

For AF40 ... AF146 block contactors

Setting range	Type	Order code	Suitable for	Packing unit	Weight per PCE
A				PCE	kg
25 ... 70	EF65-70	1SAX331001R1101	AF40, AF52, AF65	1	0.790
36 ... 100	EF96-100	1SAX341001R1101	AF80, AF96	1	0.780
54 ... 150	EF146-150	1SAX351001R1101	AF116, AF140, AF146	1	0.890

Suitable for mounting on:

AF40, AF52, AF65

AF80, AF96

AF116, AF140, AF146

Functional description

2CDC231001F0012

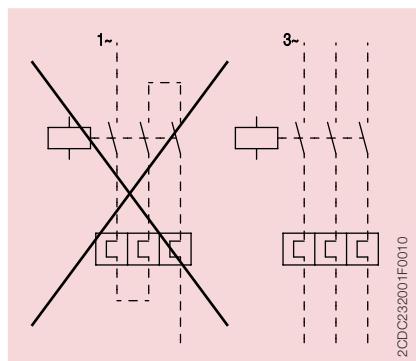

- 1** Terminals (1L1, 3L2, 5L3)
- 2** Trip class 10E, 20E, 30E selectable
- 3** RESET button
Automatic or manual reset selectable
- 4** Status indication
- 5** Signaling contacts 97-98
- 6** STOP button
- 7** Terminals 2T1, 4T2, 6T3
- 8** Current setting range
Adjustable current setting for overload protection
- 9** Tripping contacts 95-96

Application / internal function

The self-supplied electronic overload relays are three pole electronic/mechanical devices. The motor current flows through build-in current transformers and an evaluation circuit will recognize an overload (over current). This will lead to a release of the relay and a change of the contacts switching position (95-96 / 97-98). The contact 95-96 is used to control the load contactor. The electronic overload relay is self-supplied, which mean no extra external supply is needed.

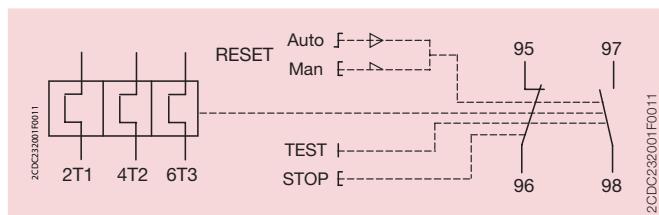

The overload relays have a setting scale in Amperes, which allows the direct adjusting of the relay without any additional calculation. In compliance with international and national standards, the setting current is the rated current of the motor and not the tripping current (no tripping at $1.05 \times I$, tripping at $1.2 \times I$; I = setting current). The relays are constructed in a way that they protect themselves in the event of an overload. The overload relay has to be protected against short-circuit. The appropriate short-circuit protective devices are shown in the table.

Operation mode

	Contact 95-96	Contact 97-98	Opto-mechanical slide	Comment
Trip state	open	closed		
RESET state	closed	open	ON	
TEST manual reset mode	open	closed		
TEST auto reset mode	open	closed		
STOP while device is in trip state	open	closed		STOP button has no function
STOP while device is in RESET state	open	open		while STOP button is pressed

Connection screw	M3.5 (Pozidriv 2)

General data

Duty time	100 %	
Operating frequency without early tripping	up to 15 operations/h or 60 operations/h with 40 % duty ratio, if the motor breaking current $6 \times I_n$ and the motor starting time does not exceed 1 s	
Dimensions (W x H x D)	see dimension drawing	
Weight	see ordering data	
Mounting	mount on the contactor and tighten the screws of the main circuit terminals	
Mounting position	optional, position 1-6	
Minimum distance to other units same type	horizontal	none
	vertical	not applicable
Minimum distance to electrical conductive board	horizontal	1.5 mm
	vertical	1.5 mm
Degree of protection	housing	IP20
	main circuit terminals	IP10
Altitude	up to 2000 m	

Electromagnetic compatibility

Immunity acc. to IEC 60947-1	Environment A
Emission acc. to IEC 60947-1	Environment B

Environmental data
